4.3 Humidity

4.4 Vibration

Cells shall be mechanically and electrically normal after vibration which has an amplitude of 4mm(0.1575 inches) a frequency of 1000 cycles per minute, which should be continued in any directions during 60 minutes

4.5 Shock

Cells shall be mechanically and electrically normal after being subjected to a drop from a height of 450mm (17.716inches) onto an oak board in a voluntary axis respectively 3 times.

4.6 Short

Cells shall not explode after 1 hour short-circuit test.

4.7 Incorrect polarity charging

Cells shall not explode after 5 hour of incorrect polarity charing at 0.5 CmA.

5. PRECAUTION

- 5.1 We recommend you to set the cut-off voltage at 1.0V/cell.
- 5.2 If the cut-off voltage is above 1.1V/cell, cells may be underutilized resulting insufficient use of the available capacity.
- 5.3 If it is below 1.0V/cell, cells may have over-discharged or reverse charged.
- 5.4 Do not detect $-\triangle V$ for first 5 minutes of charging.
- 5.5 The cells shall be delivered in discharged condition, Before testing or using, the cells shall be correctly charged in accordance with this specifications.

6. WARNING

- 6.1 Avoid direct soldering onto cells.
- 6.2 Observe correct polarity when connecting.
- 6.3 Do not charge with more than our specified current.
- 6.4 Use only within the specified working temperature range.
- 6.5 Do not subject cells or batteries to mechanical shock.
- 6.6 Do not mix cells of different manufacture, capacity, size or type within a battery.
- 6.7 Seek medical advice immediately if a cell or battery has been swallowed.
- 6.8 When disposing of secondary cells or batteries ,keep cells or batteries of different electro-chemical systems separate from each oter.
- 6.9 Do not maintain secondary cells and batteries on charge when not in use.

7. DANGER!

- 7.1 Avoid throwing cells into a fire or attempting to disassemble them. As the electrolyte inside is strong alkaline and can damage skin and clothes.
- 7.2 Avoid short circuiting. It may be leakage.
